

## CSU opts for the most modern

PLANFORUM MAGAZINE 1/2010

The departments of the Charles Sturt University are located in Orange, Bathurst, Dubbo, Albury-Wodonga and Wagga Wagga. The Wagga Wagga campus (images above) was equipped with 20 simulation units and 24 dental units.

Thanks to the active work and in-depth product knowledge of Planmeca distributor Henry Schein Halas, Charles Sturt University (CSU) in Australia chose – contrarily to the traditional trend in the continent – Planmeca dental units with side-lift mechanism and over the patient instrument delivery with balanced instrument arms for their new teaching clinics.

“Our University has a strong vision of using the state-of-the-art technology in our teaching. We believe

that the modern digital technology serves the needs of the students, and we are willing to give our students an opportunity to study in a modern clinical environment,” says **Professor Ward Massey**, Head of the CSU School of Dentistry and Health Sciences.

The contract signed in November 2008 covering 82 simulation units, 78 Planmeca Compact i units and 32 Planmeca Intra X-ray units was the first ever of this scale for Planmeca in Australia in the field of dental education.

## Peruvian diagnostic centre appraises Planmeca ProMax 3D as the pearl of engineering

Traffic at a Peruvian diagnostic center’s door has boomed during past half year. Possibility for 3D imaging attracts new customers for Imágenes RX/3D, Radiologica Digital Maxillofacial-Tomografía 3D, providing maxillofacial imaging services to dental professionals.

The company, based at Trujillo in Peru, started their cooperation with Planmeca in 1996 by purchasing PM2002CC Proline panoramic and cephalometric X-ray unit.

“PM2002 Proline has served us non-stop for fourteen years and is still in good condition,” tells **Dr Luis Gamarra Ciudad**, director of the company. “With great enthusiasm and a touch of fear, we decided last year that it’s about a time we take a technological leap forwards.”

Planmeca ProMax 3D was installed at the premises in December 2009. “Since then, it has continued to surprise us and our customers leaving both extremely satisfied with its incomparable image quality and powerful Planmeca Romexis software,” praises Dr Gamarra Ciudad.

“My only remaining concern is why we didn’t do this earlier!”

Dr. Luis Gamarra Ciudad (middle) together with his sons Dr. Miguel Gamarra Cruzado (left) and Dr. Luis Gamarra Cruzado (right) wish to thank Planmeca and Futura Medical Odontologica, Planmeca distributor in Peru, for the help in fulfilling their dream of providing the best 2D and 3D image quality for the Peruvian dentists.
